# Monitoring Relay GS500

- Input 0/4..20 mA, 0/2..10 V DC
- Contact function min/max selectable
- Hysteresis and switching delay adjustable

## Characteristics

The GS500 can be used for monitoring physical processes presented as industry standard signal. Limit value can be set from 0..100%. The adjustable switching delay prevents that short signal peaks does not activate the alarm. By an adjustable switching hysteresis a frequently switching can be suppressed with small signal variations.
