

GENERAL CHARACTERISTICS

This level switch, reliable and of robust construction, has been realized to control the storage of dusts, granules and solid products. The system is composed by a rotating shaft driven by a synchronous gear motor at low speed, when the material stops the rotation of the blades will cut off the power supply to the geared motor and it is actuated an electric changeover contact.

Can be activated: alarm signals, stopping conveyor belts, etc.

- **Control of powder material or granular**
- Stainless steel shaft with sealed self-lubricating bearings
- Flanged or threaded connection
- Housing in aluminum or stainless steel
- IP65 protection
